

Overall Description

The West Heating Plant (WHP) is not a publicly-accessible building. Keycard access is required for entry. This building contains no public restrooms or elevators. There are two separate accessible entrances to the building. The entrance to office suite 107 is located at the south end of the east facade of the building. The entrance to boiler room 105 is to the south of center of the east facade of the building, just north of the office entrance.

Office suite 107 is an open office with the exception of storage rooms 107A & 107B and office 107C, located in the northwest corner of the suite.

Boiler room 105 contains numerous environmental hazards. A trench in the floor runs from the far western wall to approximately 5 feet from eastern wall at 10 feet from the south wall of boiler room 105. Two industrial boilers, operating at high temperatures, stand near the center-north of boiler room 105. Do not enter this room without an attendant if you are not already familiar with it.

Boiler room 105 is bordered on the north by service tunnel C106 with access to gas meter vault 104 and pipe service tunnels. A small set of stairs near the center-north wall of boiler room 105 provides access to and from service tunnel C106. Boiler room 105 is bordered on the east at the south end by the main accessible entrance to WHP. Boiler room 105 is bordered on the south wall near the center by office 101, west of center by single-occupancy restroom 102, and near the west end by transformer room 103. Single-occupancy restroom 102 is not an accessible restroom. Transformer room 103 contains numerous environmental hazards, including an industrial electrical generator and transformer at each end of the room. Do not enter this room without an attendant if you are not already familiar with it. Boiler room 105 is bordered on the west by stairwell S101 with access to service catwalks.

Restrooms

An inaccessible single-occupancy restroom is located west of center on the south wall of boiler room 105.

Wheelchair Accessible Entrances and Exits

WHP is not a publicly-accessible building. Keycard access is required for entry. This building contains no accessible restrooms or elevators. Wheelchair entry to office suite 107 can be made via the entrance near the south end of the east facade of the building. Wheelchair entry to boiler room 105 can be made via the entrance west-of-center of the east facade of the building.

Elevators

There is no elevator in this building.

Stairs

Stairwell S101 is located on the west wall, toward the south end of boiler room 105. This staircase provides access to the service catwalks.

Overall Description

Access to the second floor / mezzanine is made via stairwell S201 at the west end of the boiler room. This provides access to the catwalks C201. The catwalks C201 provide access to the roof access ladders and electrical room 201.

Catwalk C201 is bordered on the south by electrical room 201 and on the west by stairwell S201 with access to the ground floor.

Restrooms

There are no restrooms on the second floor / mezzanine.

Wheelchair Accessible Entrances and Exits

There is no wheelchair access to the second floor / mezzanine.

Elevators

There is no elevator in this building.

Stairs

Stairwell S201 is located on the west wall near the center of boiler room 105. This staircase provides access to the ground floor.

Overall Description

Access to the roof of WHP is made via the roof access ladder from catwalk C201.

Restrooms

There are no restrooms on the roof of WHP.

Wheelchair Accessible Entrances and Exits

There is no wheelchair access to the roof of WHP.
