Background

Application/Study	Type of CNT	Biological System	Results	Reference	Functionalization Group	Viability Assay/Time
In vitro, cell interaction	Sieve, interlocking MWCNTs network	L-929	Non-cytotoxic	Correa-Duarte et al.	None	MTT Day 7
In vitro, cell interaction	Dissolved f-SWCNTs	Mouse spleen cells	Non-cytotoxic	Dumortier et al.	PEG	PI ELISA
In vitro, neurite growth/branching	Fixed f-MWCNTs	Rat neurons	Non-cytotoxic	Hu et al.	PABS EN	Calcein hydrolysis
In vitro, cell interaction	VAMWCNTs, horizontal interaction upon culture	L-929	Non-cytotoxic	Lobo et al.	None	MTT LDH Day 7
In vitro, neurite growth/branching	Fixed MWCNTs	Rat neurons	Non-cytotoxic	Mattson et al.	Bare and 4-hydroxynonenal	Neurite Branching
In vitro, cell interaction	Dissolved MWCNTs	HEK	Cytokine IL8 secretion	Monteiro-Riviere et al.	None	Cytokine measurement
In vitro delivery	Dissolved f-SWCNT, WT1Pep427	H-DCs/mice	Immune activation, non-cytotoxic	Villa et al.	Aromatic hydrazine + peptide	Metabolic assay Apoptosis stain ATP assay Day 5
In vitro, cell interaction	Dissolved SWCNT, DWCNT, MWCNT	Mouse osteoblasts	Reduced viability	Zhang et al.	None	MTT ALP Stain of bone nodules

CNT biocompatibility Studies

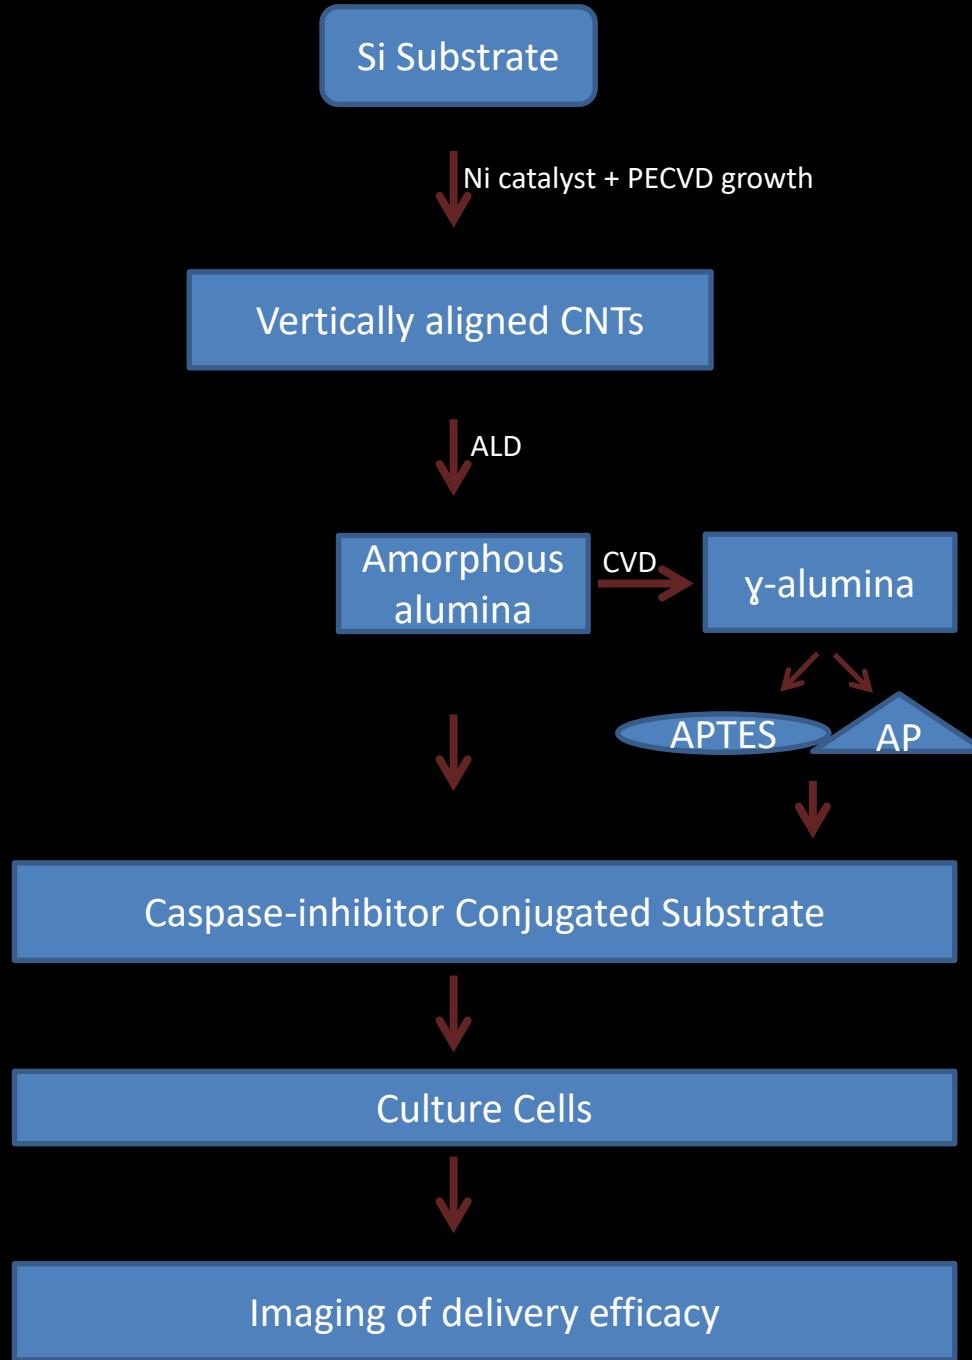

Objectives

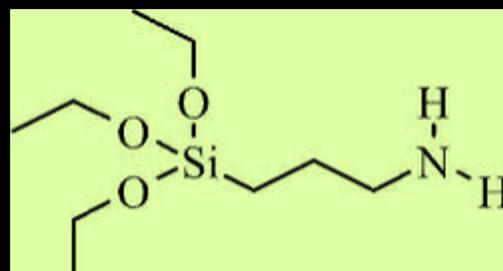

- Investigate CNT-cell interface
 - Delivery efficacy
 - Biocompatibility
 - Enhance interface via Al_2O_3
 - Enhance delivery using chemical linkers

Methods

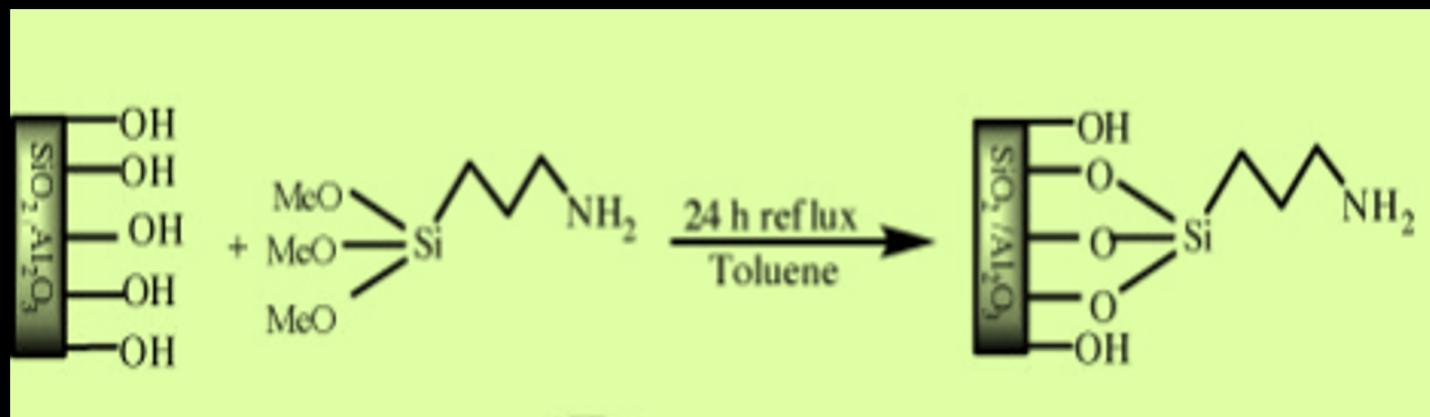

Methods

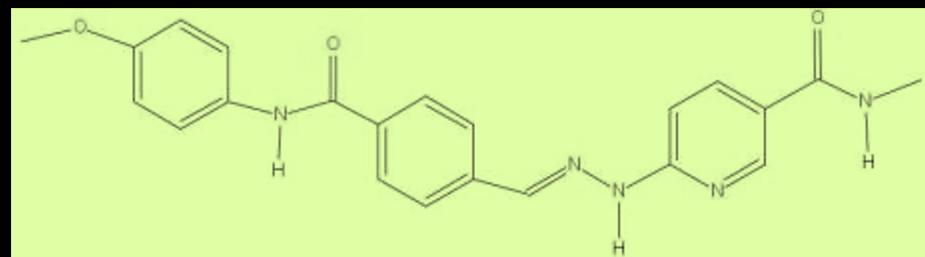

APTES

Habibi et al.

Aminophenol

Methods

Results

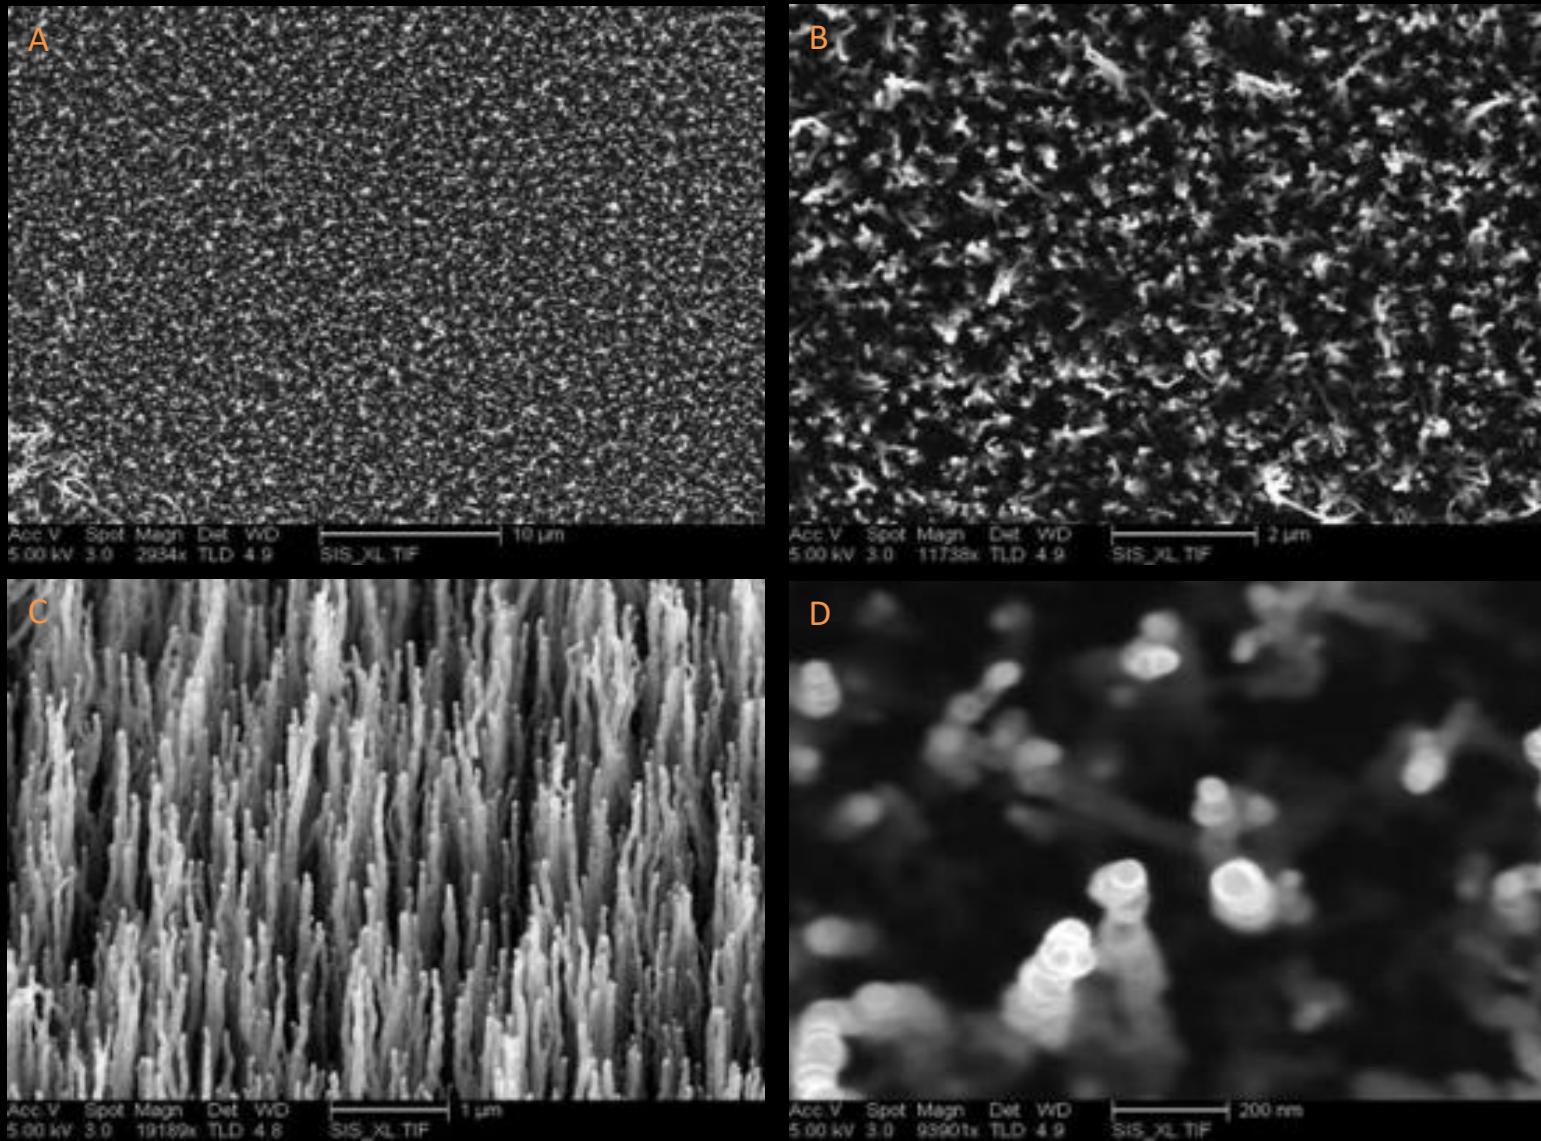

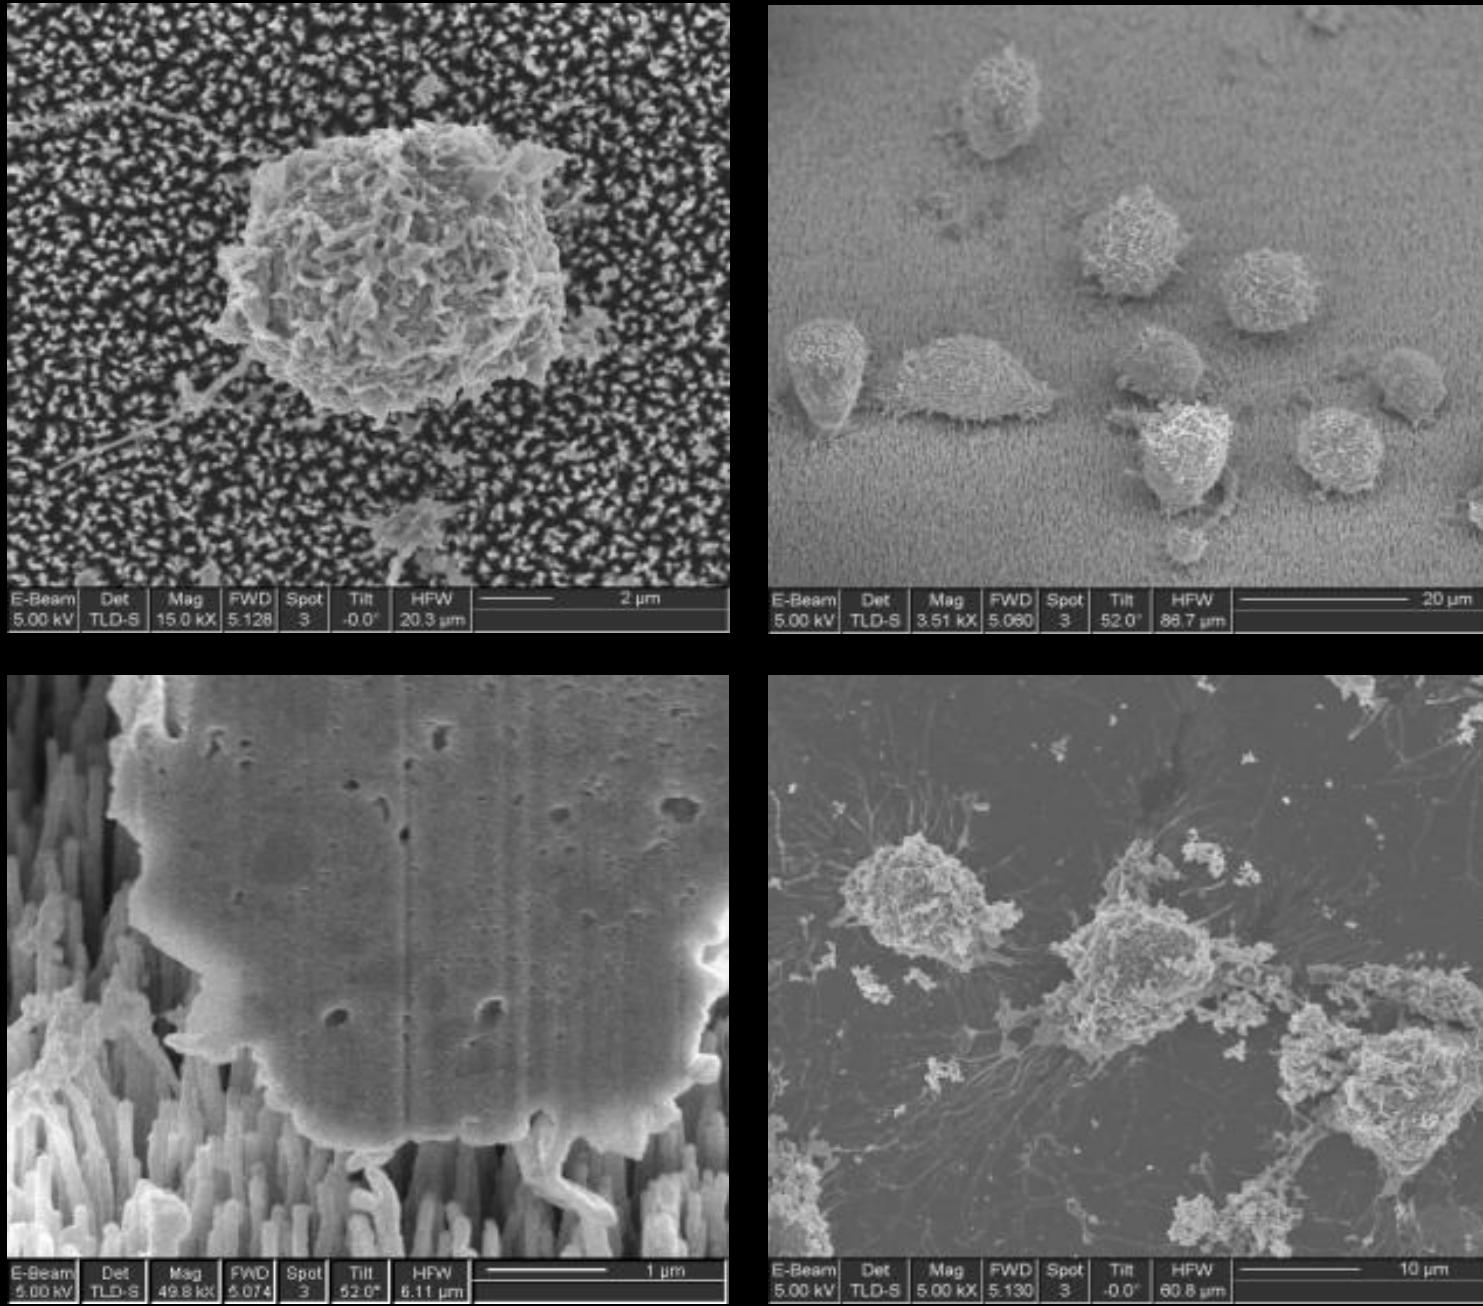

Figure 1 A-D: As-grown CNTs via PECVD using Ni catalyst. Average diameter 100 nm, length 7 μm.

Results

Results

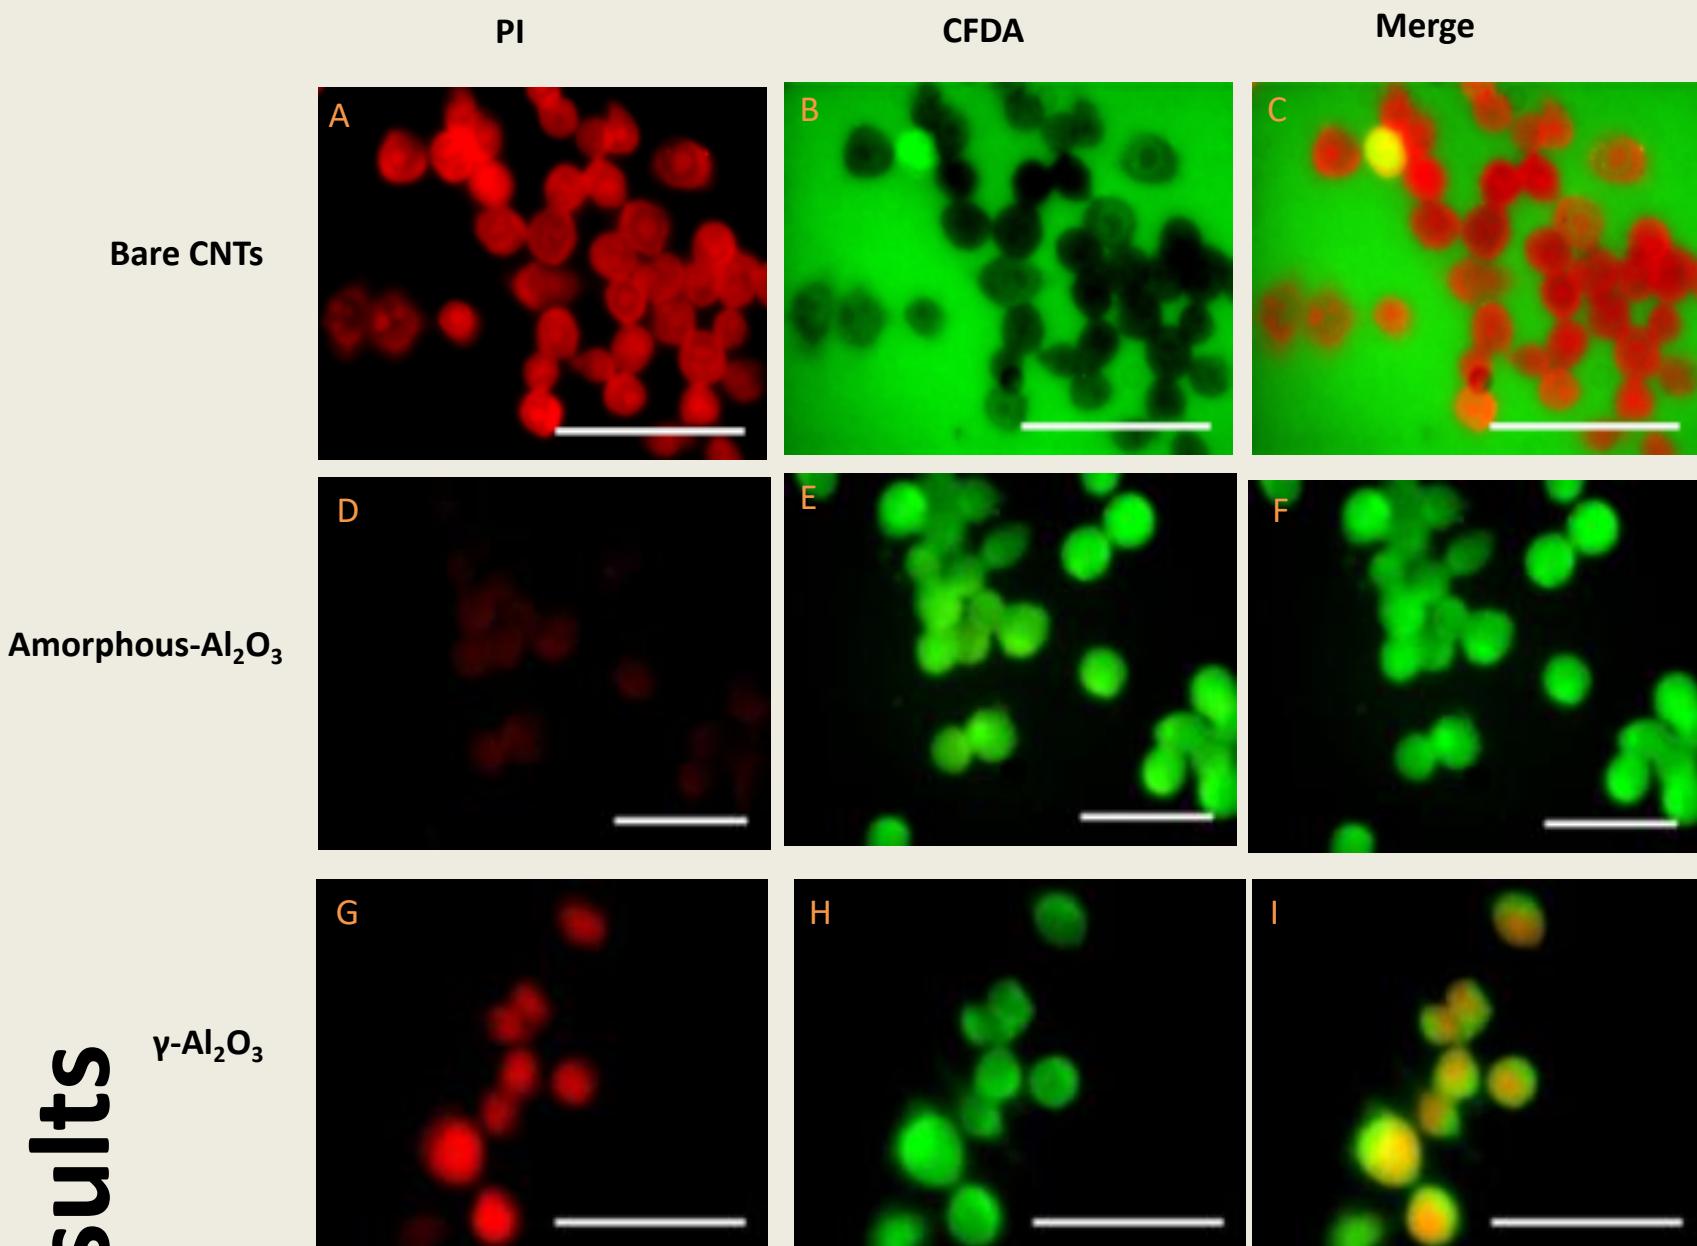

Figure 2 A-I: Bare CNTs, Amorphous-Al₂O₃ and γ-Al₂O₃ with adsorbed DEVD and TNF-α dissolved (Scale bar=60 μm).

Conclusions

- CNTs, vertically aligned (100 nm diameter) compromise cell membrane
 - Transient penetration
 - Needle/Syringe effect
 - Chemical/mechanical properties
- Amorphous-Al₂O₃ effectively delivered caspase-inhibitor
- Gamma-Al₂O₃ did not effectively deliver caspase-inhibitor

Ongoing Goals

- Dissolution controls
- Gamma-Al₂O₃ functionalization
- Mechanism-time dependent
- Neuron potential probing with CNTs
- Optogenetics
